COURSEWORK

UNDERGRADUATE

Data Structures And Algorithms

Operating Systems

Artificial Intelligence

Computer Architecture

SKILLS

PROGRAMMING

Expertise

Java • Python • Javascript • React

React Native • Nextjs • Docker • AWS

Terraform • Spring Boot • Django • PHP

Familiar

MySQL • C++ • CSS • Android • Flutter

SELF PROJECTS

- Built smartintervu (an AI powered interview automation platform) to automate tech interviews with integrations to **livekit**, **judge0**, **100ms** and **excalidraw**
- Built an **AI powered resume builder** and analyzer tool using **Nextjs**
- SaaS LMS platform using **Nextjs**
- Chrome Plugin to parse any web page automate mundane tasks like linkedin cold messaging
- Video streaming platform using Django (used Collaborative Filtering(CF) algorithm)
- Android data sharing app with LiFi
- Chrome extensions for social media automation

EXPERIENCE

SKIPPR | FOUNDING ENGINEER | LONDON (MARCH 2025-PRESENT)

- Built a vibe coding platform for game generation using GenAI
- Built a real-time on-screen agent using GenAI

FACEBOOK | SOFTWARE ENGINEER | LONDON (2022-2025)

- Enhanced C&C portal to efficiently manage ad credits at Meta
- Created Claims platform to manage refund process for Reality Labs
- Mentored new hires to help them adopt both culture & tech at Meta

GOLDMAN SACHS | BANGALORE (2019 – 2022)

- Built core platforms & services to boost hybrid cloud adoption at GS
- Lead a Hackathon (theme: security) and given **40+ trainings** at GS, on-boarding 100+ new grads to our tech stack

HIGHLIGHTED PROJECTS

EMPIRE | SKIPPR

- Built an GenAI vibe coding platform using **React**, **NextJS**, **fastAPI** and **langchain** to create entire 2D and 3D gaming apps with a single prompt
- Built a **real-time on-screen agent** that could guide and help users with interactive voice by analysing real-time transcripts and screenshots

CLAIMS@ | FACEBOOK

- Created claims platform for managing refund process in FRL, replaced existing tool (Market Medium), saving **\$100k+** in operating cost
- Designed data migration pipelines using python** to migrate data from Market Medium into Claims@ and gradually phased out the existing tool

CREDIT@ | FACEBOOK

- Upgraded notifications service to support burst traffic and added retries on failures, improved the delivery rate by 64% and scaled the service to deliver **1.2M emails every month** including **invoices worth \$10B**
- Redesigned credits portal for efficient credit lifecycle management and created tool to track user activity on tools created under our org.
- Built "Oncall Bot" a GenAI tool that triages tasks, enables self-service issue resolution, and assists engineers with code suggestions.

CLOUD ENABLEMENT | GS

- Created Operations Console (React app with python micro-service) to manage AWS operations tasks and **reducing admin access requests by 50%**. Adopted open source library (Checkov) at GS to restrict reduce risk by restricting tf misconfigurations at build time. And created intellij plugin to validate tf files with custom terraform providers.
- Lead the Quick Start initiative (to simplify cloud onboarding at GS) and reduced cloud onboarding time by 80%. And created mediation library to add exception handling, open tracing, fault injection, structured logging & metrics collection in spring apps
